Current Version

- ALPHA 0.6 (.apk 26 MB)
- Default files:
  - 5 supported alphabets: en, de, fr, sk, cz
  - 2 default word lists: cz, en – changed in settings
  - Dictionaries en-cz, cz-en
- Custom Files & Language Files:
  - On first start directory sdcard/CzechtrisFiles is created – custom file directory
  - File names for word list and dictionary can be changed in settings
  - Default files stored in jar on android device
  - More on a next slide
- 2 modes: tetris & classic – currently not enable to switch in settings
- Available on any android device or windows(buildon git hub)

Custom Files Load

- If custom dictionary is not found load default dictionary
- If custom word list is not found but custom dictionary was loaded – create word list from dictionary
- If custom word list ist not found & custom dictionary was not found – load default word list
- if word list or dictionary contains language in format: *filename_language or filename_language-otherlanguage*, check if language is supported and load alphabet
- If language is not found or not supported, create alphabet from word list

Future Updates

- SK default dictionary & word list
- More supported language alphabets
- Enable 2 word lists & dictionaries for lanugage combinations
- More tetris pieces randomized
- Delete row of letters power up
- Adding tetris pieces not costing score (different currency)
- Adding payed dictionary from lab (?)
- First letter advice in classic mode, and classic mode enabled
- More work on settings
- Linux potentially web browser version

Testing

- Need your help!

- Project available on git hub
- Testing in school enviroment in april

- Any feedback extremely useful either on git hub or at dobroslav@gmail.com
